

CO2 Activity

30/7/26

1. CCTV image contains Salt and Pepper Noise

Technique : Median filter

Reason : Removes salt and pepper noise while preserving edges.

2. Satellite image corrupted by Gaussian Noise

Technique : Gaussian filter

Reason : Smooths Gaussian noise effectively.

3. Medical X-ray has random noise, but fine edges must be preserved

Technique : Median filter

Reason : Reduces noise without blurring important edges.

4. Scanned document has black and white dots

Technique : Median filter

Reason : Reduces/Eliminates isolated black and white dots efficiently.

5. Low-light image shows heavy rain

Technique : Gaussian filter

Reason : Reduces grain/noise and gives a smoother image

6. Foggy road image has very low

Contrast

Technique : Histogram Equalization

Reason : Enhances contrast and improves visibility

7. underwater image appears dull and washed out

Technique : Histogram Equalization

Reason : Histogram equalization increases contrast and makes details clearer.

8. chest x-ray shows poor visibility of internal structures

Technique : Histogram equalization

Reason : Enhances the contrast so

internal structures becomes clearer.

9. Night time traffic image lacks
Intensity Variation

Technique : Histogram equalization

Reason : Improves intensity distribution
and overall contrast

10. Gray scale image uses only a
narrow intensity range.

Technique : Histogram equalization

Reason : Expands the narrow intensity
Redistributes intensity values
to improve overall image
contrast.
